Valsoft Assignment

Here is the assignment:

You can build this with Cursor, Windsurf, VSCode or any IDE of your choice.

Mini Library Management System Challenge

Minimum Features:

- Book Management: Add, edit, and delete books (title, author + whatever metadata you see fit).
- Check-in/Check-out: Mark books as checked in (borrowed) or checked out (returned)
- Search: Find books by title, author, or other fields.

Requirements:

- Complete a working product using any language, framework, or development tool (including AI tools).
- Provide your source code and a brief README explaining how to run it.

Bonus:

- Deploy the app and provide a URL for live testing.
- Use Loom or other video software to record a demo of the app.
- Add an authentication system with SSO, preferably with different user roles and permissions.
- Implement any AI features you can think of.
- **Add extra features as you see fit, to demonstrate your creativity.**

Evaluation Criteria:

- Completeness: Does the product work and cover the core features?
- Creativity: Are extra features and creative ideas incorporated?
- Product Quality: Is the product clean and organized?
- Usability: Is the app intuitive

Good luck 😊
